HIGHER ORDER NORMAL MODES ON A
HELICAL DIPOLE ANTENNA

BY

WERNER YEE LAIN
B.S., University of Illinois, 1964

THESIS

Submitted in partial fulfillment of the requirements
for the degree of Master of Science in Electrical Engineering
in the Graduate College of the
University of Illinois, 1965

Urbana, Illinois

TABLE OF CONTENTS

	Page
1. Introduction	1
2. Impedance Characteristics of a Base-Fed Normal Mode Helical Dipole Antenna	4
2.1 Theoretical Input Impedance	4
2.1.1 Numerical Evaluation of the Self Impedance Integrals	16
2.1.2 An Attempt at a Different Approach to the Problem	16
2.2 Experimental Input Impedance and Comparison with the Mathematical Model	18
2.2.1 Experimental Models and Measurement Apparatus	18
2.2.2 Experimental Results and Comparison with the Mathematical Model	21
3. Far-Field Radiation Patterns of a Base-Fed Normal Mode Helical Dipole Antenna	33
3.1 Theoretical Derivation of the Far-Field Radiation Pattern	36
3.1.1 Far-Field Radiation Patterns for an Arbitrary Diameter Helical Dipole Antenna	37
Principal Polarization	37
Cross Polarization	38
3.1.2 An Approximate Solution for Small-Diameter Normal Mode Helical Dipoles	39
Principal Pattern	39
Cross Polarization	41
3.2 Experimental Measurement of the Far-Field Radiation Pattern with Comparison and Results of the Mathematical Model	41
3.2.1 Coordinate System and Measurement Apparatus	42
3.2.2 Experimental Results and Comparison with the Mathematical Model	42
Principal Polarization	42
Cross Polarization	61
4. An Experimental Indication of the Current Distribution Along the Wire Helix	65
4.1 Measurement Apparatus and Method	66
4.2 Experimental Models and Results	66

TABLE OF CONTENTS (continued)

	Page
5. Design Data	71
5.1 Parameters of the Helix	71
5.2 The Sheath Helix	72
5.3 Percent Shortening Required for Resonance of the Sheath Helix	73
5.4 The Tape Helix	77
5.5 Percent Shortening Required for Resonance	81
5.6 Example of a Design of a Normal Mode Helical Dipole Antenna	81
6. Conclusion	84
References	85
